

Dear Sir or Madam,

I would like to ask about the possibility of being a candidate for the position of Junior React Developer in your company. I can demonstrate basic knowledge of a given position, willingness to work and to acquire new skills. I am a third year full-time student in Computer Science at the Faculty of Computer Science, Electrical Engineering and Automation of the University of Zielona Góra. During my studies I completed the IT Essentials course and I have a diploma in Information Technology completed at the Technical Secondary School of Electronic and Automotive Schools. I also learned the basics of the GIT version control system, but unfortunately I don't have any documents to confirm it. I am also familiar with work in accordance with the Scrum structure, because I have met it with university projects more than once. I have a driving license, category B. I know English very well and German at a basic level. In my free time I try to independently expand my knowledge about the work of a programmer in React / React-Native technology. I create my own projects, which I hope will bring many benefits someday, not only to me. However, I care about working in a team where I will be able to gain experience and get to know the profession from the practical side. I hope that you will consider my application positively.

Yours faithfully,
Daniel Gola
